

```

### Install the required sendmail packages ###
yum install sendmail sendmail-cf
yum install make m4
make all -C /etc/mail/

### Logs files to troubleshoot the error ###
Log file location = /var/log/maillog

### Edit the configuration file
vi sendmail.mc
Content to append:
    define(`SMART_HOST', `smtp.yourserver.com')dnl
    FEATURE(`authinfo', `hash /etc/mail/authinfo')dnl
    MAILER(`smtp')dnl

### Rebuild the sendmail.mc file ###
m4 /etc/mail/sendmail.mc > /etc/mail/sendmail.cf

### Add user ans password info in the /etc/mail/authinfo file ###
AuthInfo:smtp.yourserver.com "U:mail ID" "P:app password of mail" "M:PLAIN"

### make authinfo.db file###
makemap hash /etc/mail/authinfo < /etc/mail/authinfo

### restart the sendmail service ###
systemctl restart sendmail.service

### send mail using sendmail###
sendmail -s "Subject" <recipient mail ID>
> Hit enter
> enter details: FROM, TO, SUBJECT, BODY OF MAIL
> . and enter

### send file using sendmail ###

#!/bin/bash
